Haying machinery	35236	12/75	166.2	177.4	184.4	198.2	198.2
Plows and listers	35237	12/75	181.4	190.3	198.4	200.9	208.5
Garden tractors and motor tillers	35242	12/75	151.4	158.3	158.9	167.9	167.9
Lawnmowers and snow blowers	35247		222.6	229.8	231.0	250.1	248.2
Off highway wheel tractors excluding parts / attachments[2]	35311		348.8	361.9	380.2	380.5	380.5
Tracklaying tractors, except parts and attachments[2]	35312		351.6	365.9	386.9	386.9	386.9
Parts and attachments for wheel and tracklaying tractors[2]	35313	12/75	165.9	165.9	166.7	166.7	166.7
Cranes, draglines, shovels and parts/attachments[2]	35314	12/72	238.0	242.7	254.8	255.9	256.8
Mixers, pavers and related equip., ex. parts/attachments[2]	35316		253.3	261.2	267.5	268.2	268.6
Tractor shovel loaders, excluding parts/attachments[2]	35317	12/75	169.4	175.8	186.7	188.6	189.0
Scrapers, graders, rollers, off-highway trailers/wagons[2]	35318		329.9	344.6	325.8	327.2	327.3
Other construction machinery including parts/attachments[2]	35319		346.6	357.3	373.5	363.9	374.1
Underground mining machinery[2]	35321	12/72	320.0	327.5	348.4	349.0	349.2
Crushing, pulverizing, and screening machinery[2]	35322		307.9	318.6	334.9	335.2	337.8
Drills and other mining machinery[2]	35323	12/72	201.9	207.6	216.3	216.8	216.8
Parts and attachments for mining machinery and equipment[2]	35324	12/72	306.3	316.9	324.9	326.1	329.3
Oilfield and gasfield production machinery[2]	35333		430.7	454.4	475.6	469.8	468.5
Elevators and moving stairways[2]	35340		254.0	260.4	273.9	275.0	274.8
Overhead traveling cranes and monorail systems	35362	12/74	190.2	196.1	196.0	198.2	199.6
Industrial trucks and tractors[2]	35371		271.8	276.7	275.4	272.3	272.9
Gear cutting and finishing machines	35413		477.8	515.0	556.6	565.7	565.7

Technical Notes

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 2,800 commodities and about 10,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

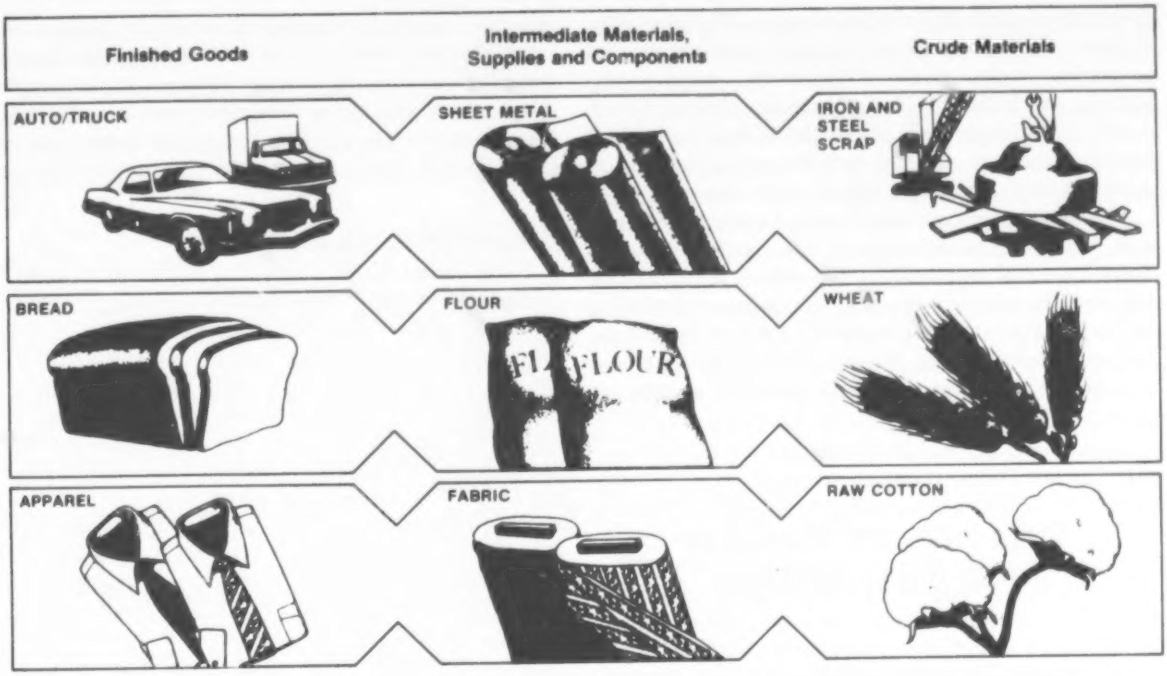
Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price change by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices



generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 9 and 10. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables 6, 9, or 10 on their original base period of 1967 = 100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 9 or 10 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights.* Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see two *Monthly Labor Review* articles by John F. Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Indexes of Living Costs Abroad,
Quarters Allowances,
and Hardship Differentials

Yearly subscription price: $6.50

What does it cost to live abroad?

Many firms need to know so they can adjust the pay of their American employees stationed abroad. The answer now is available by subscription to this quarterly publication, issued by the Bureau of Labor Statistics of the U.S. Department of Labor. The indexes are based on the difference between living costs in Washington, D.C., and each of more than 160 foreign cities. Each issue also lists U.S. State Department housing (quarters) allowances for about half of the cities and hardship differentials for all important posts.

Producer Prices and Price Indexes is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights and changes in the sample. A subscription may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Subscription price:
- $34 a year domestic (includes supplement)
- $8.50 additional foreign

Single copy $5.00
Supplement $6.00

The Secretary of Labor has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through July 31,1987. Second-class postage paid at Laurel, Md. Price Movements December 1982

The Producer Price Index for Finished Goods edged up 0.1 percent from November to December on a seasonally adjusted basis. This followed a 0.5 percent increase in October and a 0.6 percent rise in November. Prices for intermediate goods showed no change in December, after rising 0.5 percent in the previous month. Crude material prices turned down with a 0.9 percent decrease after rising in November; the December drop was the sixth in the last 7 months. (See table A.)

Among finished goods, the index for energy goods turned down following a sizable jump in the preceding month. The index for finished consumer goods other than foods and energy was virtually unchanged, after a moderate increase in November. The capital equipment index, however, climbed more than in most recent months. Finished consumer food prices inched up following 3 months of small decreases.

From December 1981 to December 1982, the Finished Goods Price Index moved up 3.5 percent. This was only half as large as the 1981 advance of 7.1 percent and was the smallest change for any calendar year since the 3.2 percent increase recorded in the 12 months ended in December 1971. As 1982 ended, the finished energy goods index was 0.1 percent below its December 1981 level; in contrast, this index had climbed 14.1 percent from December 1980 to December 1981. Capital equipment prices slowed markedly, from a 9.2 percent increase in 1981 to a 4.0 percent rise in 1982. Prices for finished consumer goods other than foods and energy also moved up less in 1982 (5.0 percent) than in the previous 12 months (7.1 percent). Consumer food prices were up 2.1 percent over the year in 1982, the second consecutive modest annual increase; these prices had risen 1.4 percent in 1981. Before seasonal adjustment, the Producer Price Index for Finished Goods ended 1982 with a 0.1 percent monthly increase to 285.1 (1967 = 100).

Finished goods

Finished consumer goods. The Producer Price Index for finished consumer goods edged down 0.1 percent seasonally adjusted, after rising 0.5 percent in October and 0.8 percent in November. The downturn was largely due to the finished energy goods index, which fell 0.7 percent after advancing 2.9 percent a month earlier. Indexes for home heating oil, gasoline, and natural gas all turned down after climbing sharply in November.

The index for finished consumer goods other than foods and energy was unchanged after rising in each

of the 2 previous months. Substantial increases were registered for tobacco products, passenger cars, gold jewelry, and tires. Prices declined, however, for cosmetics, apparel, sanitary papers, and for small arms and ammunition.

The index for finished consumer foods edged up 0.1 percent after three modest monthly decreases. Increases for fresh and dried vegetables, fish, pork, roasted coffee, and milled rice more than offset declines for eggs, processed poultry, fresh fruits, and for beef and veal.

Capital equipment. The Producer Price Index for capital equipment rose 0.6 percent, twice as much as in November. Prices turned up after falling a month earlier for fixed wing utility aircraft, agricultural machinery, plastics machinery, and generators. Railroad equipment prices advanced faster than in November, and prices for integrating and measuring instruments rose 1.0 percent for the second consecutive month. On the other hand, prices for food products machinery and rubber working machinery showed little or no change after substantial November increases.

Intermediate materials

The Producer Price Index for Intermediate Materials, Supplies, and Components registered no change in December on a seasonally adjusted basis, after rising 0.5 percent the month before. Declining prices for several industrial materials and energy goods offset increases for construction materials. From December 1981 to December 1982, the intermediate goods index edged up only 0.3 percent, less than in any other year since 1964.

The durable manufacturing materials index moved down 0.2 percent in December, following a 0.6 percent advance in November. Prices fell substantially for steel mill products (particularly tubular goods), lead, zinc, copper, tin, and Portland cement. In contrast, precious metal prices rose sharply. The index for nondurable manufacturing materials edged down 0.1 percent. Price declines for industrial chemicals, paper, paperboard, and synthetic fibers were partly offset by increases for woodpulp and inedible fats and oils.

The construction materials and components index advanced 0.6 percent, more than in any other recent month. Prices for millwork and softwood lumber rose after decreasing in most recent months. Higher prices were also recorded for fabricated structural metal products, plastic construction products, asphalt roofing, and environmental controls.

In other categories, increases occurred for electric motors, automotive hardware, and pesticides. However, prices for glass containers and foamed plastic products moved down. The intermediate energy goods index inched down 0.1 percent. Prices for residual fuel, lubricating oil materials, and liquefied petroleum gas fell considerably. In contrast, electric power and diesel fuel prices jumped for the second consecutive month. The index for intermediate foods and feeds edged up 0.1 percent in the wake of several months of declines. Prices were higher for animal feeds and flour, but fell for confectionery materials and crude vegetable oils.

Crude materials

The Producer Price Index for Crude Materials for Further Processing fell 0.9 percent after seasonal adjustment, following a 0.9 percent rise in November. Over the year, this index moved up 0.4 percent, in the wake of a 3.7 percent drop in 1981. The index for crude foodstuffs and feedstuffs declined 0.7 percent in December, after rising 1.0 percent in the preceding month. Prices for cattle, oilseeds, and live poultry fell markedly in December following November increases. Prices for corn and raw cane sugar rose much less than in November. On the other hand, wheat prices moved up sharply after a small rise in November and a substantial drop in October. After falling in the preceding month, prices turned up in December for hay, hogs, cocoa beans, and green coffee.

The crude energy materials index dropped 1.2 percent, after climbing 1.7 percent in November. Prices for natural gas decreased 0.8 percent, in contrast to a 5.0 percent upward surge in November. Crude petroleum prices fell 1.9 percent, considerably more than in November.

The index for crude nonfood materials other than energy moved down 0.9 percent, after declining 1.3 percent in the previous month. Prices for iron and steel scrap continued to drop sharply, although less than in November. Prices for potash, crude natural rubber, and cattle hides fell after rising in the previous month. In contrast, prices for logs and timber advanced for the first time since last April. Prices also rose for copper and aluminum base scrap and for raw cotton following November declines.

[1] Comprehensive relative importance figures are computed once each year in December. Data shown are expressed as a percent of total finished goods, total intermediate materials, or total crude materials. Data shown will not add up to 100.000 because not all commodity components of each stage-of-processing (SOP) index are shown; relative importance figures shown account for about 89 percent of total finished goods, about 88 percent of total intermediate materials, and about 96 percent of total crude materials. For each commodity component of the Finished Goods Index which is allocated to both capital equipment and finished consumer goods excluding foods, the relative importance figure shown reflects only the share allocated to the SOP grouping under which it is listed. For example, the relative importance figure shown for household furniture under the SOP grouping for finished consumer goods excluding foods includes the share allocated to that SOP grouping but not the share allocated to capital equipment.

Availability of Computer Tape for Producer Price Index Revision Data

A subfile computer tape for Producer Price Index Revision (PPIR) indexes is now available to the public for the first time. Previously, only Producer Price Indexes (PPI) and Industry Sector Price Indexes (ISPI) were available on tape. These tapes will continue to be produced separately; however, users are encouraged to acquaint themselves with the PPIR subfile.

The subfile contains every PPIR index which has been published for at least 1 month. Each series will contain all published historical and current PPIR index values and, for those recently introduced PPIR indexes with a corresponding PPI commodity or ISPI historical index, a set of historical PPI/ISPI index values rebased to the PPIR index base date. This creates a continuous data base and will enable users to convert to the PPIR subfile from the PPI subfile.

As new PPIR series are introduced each January and July, they will be added to the subfile. The following May and November, when the originally published January and July PPI/ISPI index values are revised and become final, all historical data from corresponding PPI/ISPI indexes will be rebased and attached to the appropriate PPIR series.

The PPIR subfile may be bought the same way as the PPI subfile. The purchase price is $85. For questions about buying the tape, please contact Brenda Kyle at (202) 523-1075. Questions concerning the contents of the subfile should be referred to Marybeth Tschetter or Peter Kuhmerker at (202) 272-5120.

Detailed Product Price Indexes in Tables 4 and 6

The Bureau of Labor Statistics is emphasizing industry-oriented price indexes by placing most newly introduced detailed product indexes in table 4, rather than in table 6, of this publication. This policy should alleviate the confusion caused by indexes for a given product appearing in more than one table.

For further information, see "Changes in Presentation of Detailed Product Price Indexes," on page 6 of *Producer Prices and Price Indexes, Data for July 1982*.

[1] Indexes with a commodity point code of .99 are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication.

[2] Data for August 1982 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. Data are not seasonally adjusted.

[3] Not available.

[4] Prices for all items in this grouping are lagged 1 month.

[5] Regional refined petroleum product prices and price indexes are presented in table 7.

[6] Prices for some items in this grouping are lagged 1 month.

[7] This grouping excludes fabricated wire products, which had been included in the discontinued code 10-13 and which are now grouped in code 10-88.

n.e.c. = Not elsewhere classified.

Note: Titles of some commodities are not shown in this table because they fail to meet our publication criteria.

[1] Data for August 1982 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication. All prices are lagged 1 month. Data are not seasonally adjusted.

[2] Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

[1] These indexes are calculated by combining the indexes listed below by commodity code after each special commodity grouping. The weights are those used for the comprehensive All Commodities index.

[2] Data for August 1982 have been revised to reflect the availability of late reports and corrections by respondents. All data are subject to revision 4 months after original publication.

All commodities except farm products: 02 through 15

All foods: 011, 017, and 02 less 0261, 0262, and 029

Processed foods: 02 less 0261, 0262, and 029

Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 0327, 03370105, 03370107, 03370109, 03370111, 034, 03810155, 03810172, 03810173, 03810239, 03810272, 03810274, 03810364, 038201, 038202, 03830322, 03830342, and 1231

Hosiery: 03810172, 03810173, 03810272, and 03810364

Underwear and nightwear: 03810174, 03810175, 03810176, 03810177, 03810178, 03810274, 03810275, 03810276, 03810277, 03810278, 03810368, and 03810369

Chemicals and allied products, including synthetic rubber and synthetic fibers: 031, 06 less 064, and 071102

Pharmaceutical preparations: 0634, 0635, and 0636

Lumber and plywood[3]: 081 and 083

Steel mill products, including fabricated wire products: 1017 and 1088

Finished steel mill products, excluding fabricated wire products: 1017 less 101701 and 101702

Finished steel mill products, including fabricated wire products: 1017 and 1088 less 101701 and 101702

Special metals and metal products: 10, 111, and 141

Fabricated metal products: 103, 104, 105, 106, 107, and 108

Copper and copper products: 10220123, 10220124, 10220125, 102301, 10240301, 10240302, 10240304, 10240305, 102502, and 102601

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 111, 112, 113, 114, 116, 116, and 119

Agricultural machinery, including tractors: 1111 and 1112 less 111151 and 111251

Metalworking machinery: 1132, 113304, 1137, and 1138

Numerically controlled machine tools: 11371111, 11371112, 11371411, and 113716

Total tractors: 1111 and 1128 less 111151, 112802, and 112803

Industrial valves: 11490101 through 11490108, 11490116 through 11490119, and 11490121 through 11490127

Industrial fittings: 11490111 through 11490115

Agricultural machinery and equipment, less parts (old commodity code 111): 111 less 111151 and 111251

Farm and garden tractors, less parts (old commodity code 1111): 1111 less 111151

Agricultural machinery excluding tractors, less parts (old commodity code 1112): 1112 less 111251

Construction materials: 0621, 0721, 0811, 08120171, 082, 083, 092, 101502, 10170399, 10170499, 10170611, 10170627, 10250101, 10250103, 10250104, 10250105, 10250121, 10250123, 10250155, 10250254, 10251993, 10260106, 10260107, 10260109, 10260111, 10260267, 10260271, 104101, 105, 106, 1071, 10730101, 10730106, 10730111, 10730112, 10730113, 10730114, 10730115, 10730155, 10730157, 107402, 107403, 107404, 10740501, 10740731, 10740781, 10740782, 10740791, 10810246, 10830201, 10830203, 10830205, 10830207, 10830209, 10830211, 10830301, 10830321, 10830323, 10830325, 10830329, 10830351, 10830361, 10880211, 10880213, 10880721, 10880961, 10890533, 1142, 1147, 11490102, 11490106, 11490112, 11490115, 11710109, 11710111, 11710112, 11710113, 11710115, 11710116, 11710117, 11710118, 11710119, 11710121, 11710265, 11710266, 11710267, 11710273, 11710274, 1212, 131105, 132, 133, 134, 136, 137, 1391, 1392, and 1393

Phase-out of the Industry Sector Price Indexes

Effective with the introduction of data for January 1983 from the Producer Price Index Revision (PPIR), selected Industry Sector Price Indexes (ISPI's) will be deleted from tables 9 and 10 of this publication for those industries which also appear in table 4, "Producer price indexes for the net output of selected industries and their products."

The PPIR sample reflected in table 4 is designed as an improvement of, and replacement for, the indexes in tables 9 and 10. The table 4 indexes are based on a large statistical sample of producers and products within the specified industries, while the original samples for the indexes in tables 9 and 10 were smaller, nonstatistical, commodity-oriented samples which were not restricted to the specified industry.

All ISPI's whose movements are currently determined by corresponding series from the Producer Price Index Revision system (as now indicated by an appropriate footnote after their titles in table 9 or 10) will be dropped from these tables as of the next issue of this publication. Remaining ISPI's will be dropped from these tables at 6-month intervals thereafter, as improved data become available. Tables 9 and 10 will eventually be discontinued; table 4 will be the primary vehicle for releasing industry-oriented price data.

As indexes are deleted from tables 9 and 10, the historical data will be incorporated into the PPIR system. This will be accomplished by rebasing the old indexes to the base period of the corresponding PPIR indexes.

Technical Notes

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 3,400 commodities and about 26,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

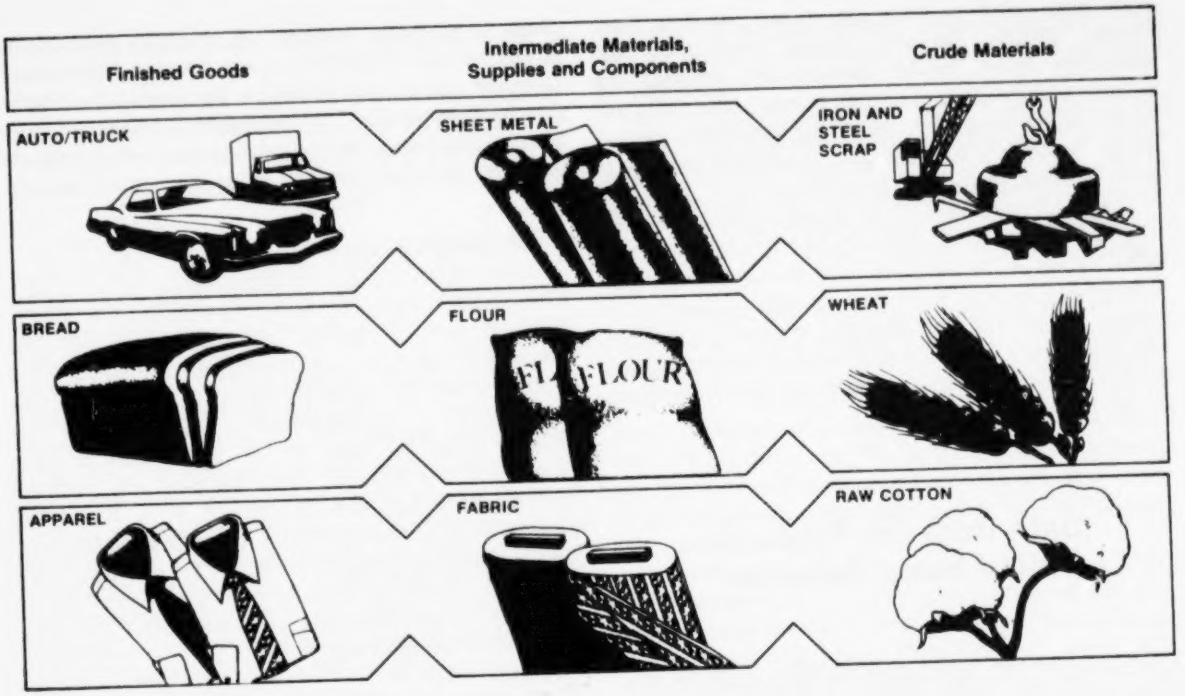
Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price change by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values for all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices



generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967, as designated by the Office of Management and Budget). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change	
Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0
Index Percent Change	
Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude

every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Each month this report presents data from the Producer Price Index (PPI) revision in table 4, "Producer price indexes for the net output of selected industries and their products." Indexes for the four industries in the pilot program to test the methodology and concepts of the PPI revision formerly appeared in table 14. Table 4 includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1985, table 4 will cover all 493 SIC mining and manufacturing industries.

Kinds of product indexes

Industries listed in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Corresponding indexes

Some 7-digit Census products published in table 4 correspond to 8-digit commodities published in table 6. Similarly, some 4-digit SIC industries and 5-digit Census product classes in table 4 correspond to the ISPI's in tables 9 and 10. In these cases, movements in the commodity or Industry-Sector Price Indexes are calculated on the basis of the movements of their counterparts in table 4. Although most such indexes continue to be published in tables 6, 9, or 10 on their original base period of 1967 = 100 or some later base, the corresponding indexes in table 4 are published on a base of the month of their introduction. Therefore, index levels for corresponding items may differ, but monthly percent changes will be identical.

A point code of ".99" immediately after an 8-digit commodity code in table 6 identifies a commodity index that is calculated from a product index in table 4. A footnote after the industry or product class title in tables 9 or 10 indicates an ISPI based on an index from table 4. The aggregation of commodity price indexes into commodity grouping indexes in table 6 continues to follow the traditional methodology; similarly, stage-of-processing price indexes in table 1 also are calculated from the commodity grouping indexes as in the past.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based*. The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be

constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights.* Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling*. In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see two *Monthly Labor Review* articles by John F. Early: "Improving the Measurement of Producer Price Change," April 1978; and "The Producer Price Index Revision: Overview and Pilot Survey Results," December 1979. Productivity and the Economy: A Chartbook

Productivity. **Everybody talks about it.**
What does it mean?
How does it affect wages and costs?
What does it have to do with employment?

This new chartbook, produced by the staff of the Bureau of Labor Statistics, answers questions in understandable—yet technically accurate—charts and captions.

The chartbook explains what productivity is, how it has changed over the years, and what factors have contributed to that change.

The 100 page chartbook, priced at $5.50, is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or you may send your order to the BLS regional office nearest you.

L 2.61:

Producer Prices and Price Indexes is a monthly report on producer price movements including text, tables, and technical notes. An annual supplement contains monthly data for the calendar year, annual averages, and information on weights. A subscription may be ordered from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The Secretary of Labor has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Department. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through July 31, 1987. Second-class postage paid at Laurel, Md. Material in this publication is in the public domain and may be reproduced without permission of the Federal Government. Please credit the Bureau of Labor Statistics.

Preface

This annual supplement to *Producer Prices and Price Indexes* presents monthly indexes and annual averages for 1982. This is the first supplement to include price indexes for the net output of selected industries and their products, as calculated with the methodology of the Producer Price Index Revision. In most cases, data in this supplement are the same as revised data published in successive monthly issues of this periodical. This supplement also provides information on the relative importance of index components at the end of the year.

Information on changes in the sample for Producer Price Indexes is no longer being published in the annual supplement. Such information can be found in the July 1982, January 1983, and February 1983 issues.

Monthly Indexes and Annual Averages for Producer Price Indexes, 1982

Tables 1 through 11 present 1982 monthly indexes and annual averages for all categories covered under the Producer Price Index program. For the first time, data are presented for series calculated under the survey for the Producer Price Index Revision program. Data shown are the revised data published in successive monthly issues of *Producer Prices and Price Indexes*. (All monthly data are subject to revision 4 months after original publication.) Data are not seasonally adjusted.

Effective with the introduction of data for January 1983 from the Producer Price Index Revision (PPIR), selected Industry Sector Price Indexes (ISPI's) were dropped from publication for those industries which also appear in table 4 in monthly issues of this report, "Producer price indexes for the net output of selected industries and their products."

The PPIR indexes reflected in supplement table 3 are designed as an improvement of, and replacement for, the ISPI's in supplement tables 7 and 8. The supplement table 3 indexes are based on a large probability sample of producers and product within the specified industries, while the indexes in supplement tables 7 and 8 were based on smaller, judgmental, commodity-oriented samples which were not restricted to the specified industry.

ISPI's whose movements had been determined by corresponding series from the Producer Price Index Revision system (as indicated by an appropriate footnote after their titles in supplement table 7 or 8) have not been published since December 1982. Remaining ISPI's will be dropped from these tables as improved data become available. Supplement tables 7 and 8 will eventually be discontinued; table 3 will be the primary vehicle for presenting industry-oriented price data in the supplement.

As indexes are deleted from supplement tables 7 and 8, the affected historical data will be incorporated into the PPIR system. This will be accomplished by rebasing the old indexes to the base period of the corresponding PPIR indexes.

[1] Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents.

[2] Industry and product class indexes may include products not shown separately.

[3] This index was introduced in midyear, and has been linked backward with a rebased PPI series. The annual average is computed from both the PPIR series and the corresponding rebased indexes for the PPI series.

[4] Not available.

n.e.c = Not elsewhere classified.

mfpm = Made from purchased materials.

n.s.k. = Not specified by kind.

Note: Indexes in this table are calculated by a revised methodology. See "Technical Note on Data from the Producer Price Index Revision" at the back of this publication. The annual average calculation method for the PPIR differs from that of the PPI(table 4). The PPIR method averages the unrounded monthly indexes, and also includes unpublished monthly data. Therefore, the annual averages may not agree with those computed by averaging the monthly indexes as shown above.

[1] Since February 1973, all prices have been lagged one month. Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents.

[2] Caution should be used in interpreting month-to-month changes because of low response rates, which ranged from 30 to 60 percent for these indexes.

[1] These indexes are calculated by combining indexes listed below by commodity code after each special commodity grouping (titles in table 4). Weights are those used for the comprehensive All Commodities index.

[2] Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents.

All commodities except farm products: 02 through 15

All foods: 01-1, 01-7, and 02 less 02-61, 02-62, and 02-9

Processed foods: 02 less 02-61, 02-62 and 02-9

Industrial commodities less fuels and related products and power: 03, 04, and 06 through 15

Selected textile mill products: 03-27, 03-37-01-05, 03-37-01-07, 03-37-01-09, 03-37-01-11, 03-4, 03-81-01-55, 03-81-01-72, 03-81-01-73, 03-81-02-39, 03-81-02-72, 03-81-02-74, 03-81-03-62, 03-81-03-64, 03-82-01, 03-82-02, 03-83-03-22, 03-83-03-42 and 12-31

Hoisery: 03-81-02-72, 03-81-01-73, 03-81-02-72 and 03-81-03-64

Underwear and nightwear: 03-81-01-74, 03-81-01-75, 03-81-01-76, 03-81-01-77, 03-81-01-78, 03-81-02-74, 03-81-02-75, 03-81-02-78 and 03-81-03-62

Chemicals and allied products, including synthetic rubber and synthetic fibers: 03-1, 06 less 06-4, and 07-11-02

Pharmaceutical preparations: 06-34, 06-35 and 06-36

Lumber and plywood[3]: 08-1 and 08-3

Steel mill products, including fabricated wire products: 1017 and 1088

Finished steel mill products, excluding fabricated wire products: 10-17 less 10-17-01 and 10-17-02

Finished steel mill products, including fabricated wire products: 10-17 and 10-88 less 10-17-01 and 10-17-02.

Special metals and metal products: 10, 11-1 and 14-1

Fabricated metal products: 10-3, 10-4, 10-5, 10-6, 10-7 and 10-8

Copper and copper products: 10-22-01-23, 10-22-01-24, 10-22-01-25, 10-23-01, 10-24-03-01, 10-24-03-02, 10-24-03-04, 10-24-03-05, 10-25-02 and 10-26-01

Machinery and motive products: 11 and 14

Machinery and equipment, except electrical: 11-1, 11-2, 11-3, 11-4, 11-6, 11-8, and 11-9

Agricultural machinery including tractors: 11-11 and 11-12 less 11-11-51 and 11-12-51

Metalworking machinery: 11-32, 11-33-04, 11-37, and 11-38

Numerically controlled machine tools: 11-37-11-11, 11-37-11-12, 11-37-14-11, and 11-37-16

Total tractors: 11-11 and 11-28 less 11-11-51, 11-28-02, and 11-28-03

Industrial valves: 11-49-01-01 through 11-49-01-08, 11-49-01-16 through 11-49-01-19, and 11-49-01-21 through 11-49-01-27

Industrial fittings: 11-49-01-11 through 11-49-01-15

Agricultural machinery and equipment, less parts (old commodity code 11-1): 11-1 less 11-11-51 and 11-12-51

Farm and garden tractors, less parts (old commodity code 11-11): 11-11 less 11-11-51

Agricultural machinery excluding tractors, less parts (old commodity code 11-12): 11-12 less 11-12-51

Construction materials: 08-21, 07-21, 08-11, 08-12-01-71, 08-2, 08-3, 09-2, 10-15-02, 10-17-03-99, 10-17-04-99, 10-17-08-11, 10-17-08-27, 10-25-01-01, 10-25-01-03, 10-25-01-04, 10-25-01-05, 10-25-01-21, 10-25-01-23, 10-25-01-55, 10-25-02-54, 10-25-19-93, 10-26-01-06, 10-26-01-07, 10-26-01-09, 10-26-01-11, 10-26-02-67, 10-26-02-71, 10-41-01, 10-5, 10-6, 10-71, 10-73-01-01, 10-73-01-08, 10-73-01-11, 10-73-01-12, 10-73-01-13, 10-73-01-14, 10-73-01-15, 10-73-01-55, 10-73-01-57, 10-74-02, 10-74-03, 10-74-04, 10-74-05-01, 10-74-07-31, 10-74-07-81, 10-74-07-82, 10-74-07-91, 10-81-02-46, 10-83-02-01, 10-83-02-03, 10-83-02-05, 10-83-02-07, 10-83-02-09, 10-83-02-11, 10-83-03-01, 10-83-03-21, 10-83-03-23, 10-83-03-25, 10-83-03-29, 10-83-03-51, 10-83-03-81, 10-88-02-11, 10-88-02-13, 10-88-07-21, 10-88-09-61, 10-89-05-33, 11-42, 11-47, 11-49-01-02, 11-49-01-06, 11-49-01-12, 11-49-01-15, 11-71-01-09, 11-71-01-11, 11-71-01-12, 11-71-01-13, 11-71-01-15, 11-71-01-16, 11-71-01-17, 11-71-01-18, 11-71-01-19, 11-71-01-21, 11-71-02-65, 11-71-02-66, 11-71-02-67, 11-71-02-73, 11-71-02-74, 12-32, 13-11-05, 13-2, 13-3, 13-4, 13-6, 13-7, 13-91, 13-92, and 13-93

[1] Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents. Revised indexes may not agree with previously published revised data because of a comprehensive historical revision which became effective with the April 1983 issue of this publication. In particular, the May through December indexes for Local service, Coin, Toll services, and Interstate MTS and the January through December Directory advertising indexes have been revised.

[2] Telephone services contained in the Consumer Price Index cover not only local residential service, but also parts of toll service, equipment leasing (such as extension phones), and non-recurring charges (such as installation).

[1] Monthly data and annual averages have been revised to reflect the availability of late reports and corrections by respondents.

[2] Postal service prices contained in the Consumer Price Index are from first class and fourth class mail.

[3] Public service appropriation was discontinued effective the beginning of FY 1983 (October 1982).

Relative Importance

Tables 12, 13, and 14 contain relative importance data as of December 1982 by stage of processing; by commodity groups, subgroups, product classes, and individual items; and for the output of selected Standard Industrial Classification industries and census product classes.

The relative importance of a category on a specific date represents the value of shipments for that category plus the value of unpriced commodities assumed to have price movements similar to those of the priced items. Relative importance data are generally expressed as a percentage of the total weight of some composite grouping. Data in table 12 are expressed as a percentage of one of the three major stage-of-processing indexes, i.e., Finished Goods, Intermediate Goods, or Crude Goods. All data in table 13 are expressed as a percentage of the All Commodities index. Table 14 shows relative importance of product classes with respect to each 4-digit industry.

For a description of the procedures for calculating relative importance data, see *Producer Prices and Price Indexes, Supplement 1979, Data for 1978.* Guidelines for combining components to construct special indexes are presented in *Supplement to Producer Prices and Price Indexes, Data for 1981.*

[1] The relative importance of a component represents its value weight that is allocated to a particular stage-of-processing (SOP) category—finished goods, intermediate materials, or crude materials—expressed as a percentage of the total weight of the SOP category. See note on relative importance on page 00.

NOTE: Individual items and subtotals may not add exactly to totals because of rounding differences. The value 0.000 represents a percentage less than 0.0005. A dash in the "Former" column indicated a new SOP allocation effective January 1983; a dash in the "Revised" column indicated that the series is no longer included in the indicated SOP category.

[1] Comprehensive relative importance figures are computed once each year in December. See note on pg. 00. The "Revised" column shows relative importance figures for December 1982 based on 1972 shipment values from the Census of Manufactures and other sources, after the sample revision effective January 1983; the "Former" relative importance figures are for the same month before the revision of the index sample. Except for recodes, a dash in the "Former" column indicates the series was introduced in January 1983, and a dash in the "Revised" column indicates that the series was discontinued as of January 1983.

[2] The relative importance data for the three major SOP groupings—Finished Goods, Intermediate Materials, and Crude Materials—do not add up to 100.000 because they exclude the portion of goods which are allocated to government purchases and exports.

Brief Explanation of Producer Price Indexes

Producer price indexes measure average changes in prices received in primary markets of the United States by producers of commodities in all stages of processing. These data were previously presented as the Wholesale Price Index. The name "Producer Price Indexes" is now being used to reflect more accurately the coverage of the data. The sample used for calculating these indexes continues to contain nearly 3,400 commodities and about 26,000 quotations selected to represent the movement of prices of all commodities produced in the manufacturing, agriculture, forestry, fishing, mining, gas and electricity, and public utilities sectors. The universe includes all commodities produced or imported for sale in commercial transactions in primary markets in the United States.

Producer price indexes can be organized by stage of processing or by commodity. The stage-of-processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition.

Finished goods are commodities that will not undergo further processing and are ready for sale to the ultimate user, either an individual consumer or a business firm. Capital equipment (formerly called producer finished goods) includes commodities such as motor trucks, farm equipment, and machine tools. Finished consumer goods include foods and other types of goods eventually purchased by retailers and used by consumers. Consumer foods include unprocessed foods such as eggs and fresh vegetables, as well as processed foods such as bakery products and meats. Other finished consumer goods include durables such as automobiles, household furniture, and jewelry, and nondurables such as apparel and gasoline.

Intermediate materials, supplies, and components are commodities that have been processed but require further processing before they become finished goods. Examples of such semifinished goods include flour, cotton yarns, steel mill products, belts and belting, lumber, liquefied petroleum gas, paper boxes, and motor vehicle parts.

Crude materials for further processing include products entering the market for the first time which have not been manufactured or fabricated but will be processed before becoming finished goods. Scrap materials are also included. Crude foodstuffs and feedstuffs include items such as grains and livestock. Examples of crude nonfood materials include raw cotton, crude petroleum, natural gas, hides and skins, and iron and steel scrap.

For analysis of general price trends, stage-of-processing indexes are more useful than commodity grouping indexes. This is because commodity grouping indexes sometimes produce exaggerated or misleading signals of price changes by reflecting the same price movement through various stages of processing. For example, suppose that a price rise for steel scrap results in an increase in the price of steel sheet and then an advance in prices of automobiles produced from that steel. The All Commodities Price Index and the Industrial Commodities Price Index would reflect the same price movement three times—once for the steel scrap, once for the steel sheet, and once for the automobiles. This multiple counting occurs because the weighting structure for the All Commodities Index uses the total shipment values of all commodities at all stages of processing. On the other hand, the Finished Goods Price Index would reflect the change in automobile prices, the Intermediate Materials Price Index would reflect the steel sheet price change, and the Crude Materials Price Index would reflect the rise in the price of steel scrap. (See illustration.)

To the extent possible, prices used in calculating producer price indexes apply to the first significant commercial transaction in the United States, from the production or central marketing point. Price data are generally collected monthly, primarily by mail questionnaire. Respondents are asked to provide net prices or to provide all applicable discounts. BLS attempts to base producer price indexes on actual transaction prices; however, list or book prices are used if transaction prices are not available. Most prices are obtained directly from producing companies on a voluntary and confidential basis, but some prices are taken from trade publications or from other Government agencies. Prices generally are reported for the Tuesday of the week containing the 13th day of the month.

In calculating producer price indexes, price changes for the various commodities are averaged together with weights representing their importance in the total net selling value of all commodities as of 1972. The detailed data are aggregated to obtain indexes for stage-of-processing groupings, commodity groupings, durability of product groupings, and a number of special composite groupings. Each index measures price changes from a reference period which equals 100.0 (usually 1967). An increase of 125 percent from the reference period in the Finished Goods Price Index, for example, is shown as 225.0. This change can also be expressed in dollars, as follows: "The price of a representative sample of finished goods sold in primary markets in the United States has risen from $100 in 1967 to $225."

Calculating Index Changes

Movements of price indexes from one month to another are usually expressed as percent changes rather than changes in index points because index point changes are affected by the level of the index in relation to its base period, while percent changes are not. The box shows the computation of index point and percent changes.

Index Point Change

Finished Goods Price Index	185.5
less previous index	184.5
equals index point change	1.0

Index Percent Change

Index point change	1.0
divided by the previous index	184.5
equals	0.005
result multiplied by 100	0.005 x 100
equals index percent change	0.5

Percent changes for 3-month and 6-month periods are expressed as annual rates that are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

Seasonally Adjusted and Unadjusted Data

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics published seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted data usually are preferred because they eliminate the effect of changes that normally occur at about the same time and in about the same magnitude every year—such as price movements resulting from normal weather patterns, regular production and marketing cycles, model changeovers, seasonal discounts, and holidays. For this reason, seasonally adjusted data more clearly reveal the underlying cyclical trends. Seasonally adjusted data are subject to revision when seasonal factors are revised each year.

The unadjusted data are of primary interest to users who need information which can be related to the actual dollar values of transactions. Individuals requiring this information include marketing specialists, purchasing agents, budget and cost analysts, contract specialists, and commodity traders. Unadjusted data generally are used in escalating contracts such as purchase agreements or real estate leases.

Data from the Producer Price Index Revision

Data from the Producer Price Index (PPI) Revision are presented in table 3 of this supplement and in the monthly issues of this report in table 4, "Producer price indexes for the net output of selected industries and their products." Table 4 of the monthly issues of this report includes data for additional Standard Industrial Classification (SIC) industries (4-digit level) and Census products (7-digit level); indexes for Census product classes (5- and 6-digit levels) and more detailed subproducts (9-digit level); and, for some industries, indexes for other sources of revenue. Thus, table 4 shows all official indexes arising from the ongoing PPI revision. By 1986, table 4 will cover nearly all 493 SIC mining and manufacturing industries.

Kinds of product indexes

Industries listed monthly in table 4 may be represented by one to three kinds of product indexes. Every industry has *primary product indexes* to show changes in prices received by establishments classified in the industry for products made primarily, but not exclusively, within that industry. To be classified in an industry, an establishment must have a plurality of its total shipment value accounted for by primary products. In addition, some industries also may have *secondary product indexes* to show changes in prices received by establishments classified in the industry for products primary to some other industry. Finally, some industries have *miscellaneous receipts indexes* to show price changes in other sources of revenue received by establishments within the industry which are not derived from the sale of their products. Because of the distinction between primary and secondary products, an index for a product made in one industry may differ from the index for the same product made in another industry.

Phase-out of ISPI's

Effective with the introduction of data for January 1983 from the Producer Price Index Revision (PPIR), selected Industry Sectory Price Indexes (ISPI's) were dropped from publication for those industries which also appear in table 4 in monthly issues of this report, "Producer price indexes for the net output of selected industries and their products."

The PPIR indexes reflected in table 4 (supplement table 3) are designed as an improvement of, and replacement for, the ISPI's in tables 9 and 10 (supplement tables 7 and 8). Table 4 indexes are based on a large probability sample of producers and products within the specified industries, while the indexes in tables 9 and 10 were based on smaller, judgmental, commodity-oriented samples which were not restricted to the specified industry.

ISPI's whose movements had been determined by corresponding series from the Producer Price Index Rivision system (as indicated by an appropriate footnote after their titles in table 9 or 10) have not been published since December 1982. Remaining ISPI's will be dropped from these tables as improved data become available. Tables 9 and 10 will eventually be discontinued; table 4 will be the primary vehicle for presenting industry-oriented price data in the monthly report.

As indexes are deleted from tables 9 and 10, the affected historical data will be incorporated into the PPIR system. This will be accomplished by rebasing the old indexes to the base period of the corresponding PPIR indexes.

How new indexes differ from traditional commodity indexes

New indexes differ from traditional commodity indexes in a number of respects:

(1) New indexes are *industry-based.* The entire output of each industry is sampled, including primary and secondary production and miscellaneous receipts. Traditional commodity indexes are based on a selection of the most important commodities, and most Industry-Sector Price Indexes continue to be calculated from these traditional commodity indexes. In addition, traditional ISPI's do not cover miscellaneous receipts, and prices of products are included without systematic regard for the industry classification of the producer. New indexes, on the other hand, are based on prices of primary and secondary products made by producers classified in the specified industry; as a result, new indexes apply to production within the specified industry. As data from more mining and manufacturing industries become available, additional indexes will be constructed to cover each product regardless of the industry of origin.

(2) New indexes are easier to use with other industry-oriented economic data because they are *classified according to the SIC* and incorporate most features of the Census of Manufactures product code extensions of the SIC.

(3) New indexes use *net output values of shipments as weights.* Net output values refer to the value of shipments leaving the industry and exclude intra-industry shipments. In contrast, weights in traditional commodity price indexes and ISPI's include shipments within an industry. The resulting multiple-counting of price changes at successive stages of processing is one major defect of the traditional commodity grouping indexes. Stage-of-processing indexes partially correct this defect, but new indexes consistently correct it at all levels of aggregation. (Net output weights are not used, however, for traditional commodity indexes whose movements are based on corresponding new indexes.)

In the revision program, the relative importance of items within a product is based upon shipment value data and sampling weights from the revision survey itself. When detailed products are aggregated to the 5-digit product class and 4-digit industry levels, however, weights are taken from Census of Manufactures data, along with estimates of intra-industry shipments from input-output tables produced by the Bureau of Economic Analysis of the U.S. Department of Commerce.

(4) New indexes emphasize *actual transaction prices at the time of shipment* to minimize the use of list prices and order prices, which occasionally have been used in traditional commodity price indexes and ISPI's. In addition, some traditional indexes have been calculated intentionally from order prices rather than from shipment prices.

(5) New indexes are based on prices reported by companies of all sizes and locations selected by *probability sampling.* In addition, individual items and transaction terms from these firms are chosen by probability techniques. (Estimates of sampling error will be published later.) In the traditional PPI program, major companies selected on a judgment basis have been asked to report prices for volume-selling items under "typical" transaction terms.

For further information on the underlying concepts and methodology of the PPI revision, see "The Producer Price Index Revision: Overview and Pilot Survey Results," by John F. Early, in the December 1979 issue of the *Monthly Labor Review,* and chapter 7, "Producer Prices," in the *BLS Handbook of Methods, Volume I,* Bulletin 2134-1 (1982).
